

Biometric System for Small Business

timeQplus Biometric at a glance

- ?? **Versatile** — Offers multiple communications options (RS232, RS485, Ethernet) for connecting the terminal to your PC. You can optimize your system setup to meet the needs of your company
- ?? **Expandable** — The system accommodates 125 employees initially. You can upgrade the software to handle up to 250 employees and add more terminals as you require. This system can grow with your business.
- ?? **Economical** — No need to spend money on paper time cards or replacements for lost or damaged employee badges. Save time and eliminate clerical errors in payroll processing by exporting data directly to your payroll application or service provider.
- ?? **Secure** — Reliable biometric technology ensures that employees have to be present to punch in. No more costly buddy-punching.

Powerful and flexible time and attendance tracking

The complete timeQplus Biometric package includes a sleek TQ100 fingerprint biometric terminal with a power supply, a 30-foot RS232 cable, a six-foot Ethernet (network) cable, advanced Attendance Rx software, a Quick Start Guide, and user manuals for the terminal and the software.

Connect the terminal to your PC or network and it's everything you need to get started with simple, reliable biometric time and attendance tracking.

Please note: timeQplus Biometric requires Windows XP Professional, Windows 2000 Professional, Windows 2003 Server or Windows Vista (Attendance Rx software version 2.3.20 or above). The software is not supported for the Windows 98SE, Windows NT or Windows XP Home operating systems.

The basic system will accommodate up to 125 employees. If you have a larger facility, the system can easily be expanded to include multiple terminals. The software can be upgraded to accommodate up to 250 employees. This means the timeQplus Biometric system can easily grow as your business grows!

Employees can clock in easily with fingerprint only entry. No PIN numbers are required, but optional keypad entry offers an alternative. The LCD panel on the terminal confirms a successful punch and displays the employee's hours worked.
