Amano Cincinnati's MJR-8000N is designed for companies who want the accuracy and power of automated time and attendance system without giving up the use of time cards. The MJR-8000N is a time card-based data collection terminal that collects time and attendance data and records individual punches on time cards. It also saves time and effort by allowing you to automatically print employee names on time cards. Your employees gain immediate assurance that their attendance and work activities are being recorded properly, while your managers gain more control over payroll costs. Rechargeable battery backup prevents data loss during power failures and the optional Full Power Reserve Battery will allow limited punches even during power failures.
